Circuit Emergencies

In-Flight Reference Card — Phase 2 — Stage C3 | E8, E11

AIM: Manage simulated engine failures and circuit abnormalities with correct decisions and procedures.

- DP **RTO**: 3-step — throttle, brakes + elevator, directional control; ***max 2 RTOs then 15 min brake cooldown*** ☐
- DP **EFATO**: Nose down, throttle closed, land ahead; ***no turn-back***; student patters landing area selection ☐
- DP **EFIC downwind**: Glide attitude; one-third aim point; turn towards final immediately; student practices ☐
- DP **Sideslip on final**: Demo entry, hold, exit; student practices on normal final at safe height ☐
- P **EFIC from base**: Student assesses glide; configures; sideslip or field ☐
- P **Flapless circuit**: Vapp +5 kt; attitude higher; shallower angle; longer rollout; instructor patters while student performs on first attempt ☐
- P **Low level circuit**: 500 ft AGL — deteriorating weather scenario ☐
- P **Partial power failure**: Instructor reduces without announcement; student takes appropriate action ☐
- P **Occupied runway**: Go-around immediately without prompting ☐
- P **Normal circuits with landings**: Interspersed throughout ☐

COMMON ERRORS

- **Large turn after EFATO** -> Land ahead — **non-negotiable**
- **Not lowering nose** -> Attitude first — nose down, throttle closed
- **Delayed EFIC** -> Plan must exist before the emergency
- **Sideslip too low** -> Never below 100 ft without runway assured

STANDARDS FOR PROGRESSION

P S C NC

Two separate flights at S standard required before solo authorisation

Solo (S): EFATO — nose down, land ahead within 3 s; EFIC correct at every position; flapless ±200 m; sideslip correct; occupied runway go-around without prompting; RTO within 2 s

⚠️ **SAFETY** All sims briefed; student confirms · **Never simulate EFATO in a way that endangers aircraft** · Low-level EFATO (below 300 ft): only permitted if initiated from a go-around before landing threshold - prohibited RWY 36 · Sideslip: never below 100 ft without runway assured · student's hand on throttle at all times
