Straight and Level Flight

In-Flight Reference Card — Phase 1 — Lesson 2 | E3

AIM: Fly constant direction and altitude at varying airspeeds using the PAT and LARI workcycles.

- [ ] D **QNH**: Set during taxi using ATIS/AWIS or airfield elevation; student observes
- [ ] DP **E8 Takeoff**: Instructor TO/liftoff; student takes control in initial climb — maintain heading on reference
- [ ] DP **S&L cruise**: **PAT** to establish; hold attitude ***without instruments***; student practices
- [ ] DP **Deviation/correction**: Instructor induces pitch/roll/power deviations; student corrects
- [ ] DP **LARI**: Introduce PAT -> LARI transition; same deviation/correction sequence, just use LARI after each
- [ ] P **Level flight**: Maintain ±150 ft; use LARI to maintain
- [ ] DP **Coordination**: Demo ball movement and rudder correction; student maintains ball ±1/4 width
- [ ] DP **Slow cruise**: PAT to transition; LARI to maintain; student practices
- [ ] P **Deviation correction**: Recognise and correct within 15 s
- [ ] P **Scenario**: Cruise hdg 2 min -> slow cruise 2 min -> resume cruise

COMMON ERRORS

- **Chasing instruments** -> Horizon first; instruments confirm
- **Wrong trim direction** -> Pushing = finger down; pulling = thumb up
- **Uncoordinated** -> "Squeeze the ball" — rudder with aileron
- **Poor lookout** -> LARI — Lookout is the **first** step

STANDARDS FOR PROGRESSION

P S C NC

Progressing (P): Hdg ±15°, alt ±300 ft; trim correct direction with reminders

Solo (S): Hdg ±5°, alt ±150 ft, ASI ±10 kt; QNH with guidance; ball ±1/4 with prompting

⚠️ **SAFETY** Exercises **above 1500 ft AGL** · Ceiling >2000 ft, wind <25 kt
