

AIM: Demonstrate all Phase 4 elements and full E13 competency in a student-planned flight. Meet second S standard for E14. Confirm readiness for unsupervised area solo.

ASSESSMENT FLIGHT – STUDENT AS PIC

- **Instructor is assessor throughout – no coaching or prompting**
- Startup → taxi → all radio calls → departure (E8 assessed)
- Transponder: correct code; squawk ALT once airborne
- Area departure call; track on visual landmarks; boundaries monitored
- **HASELL before sequence and every 15 minutes**
- E9: steep turns 45° or 60° AoB
- E10: ≥1 turning stall; HASELL before sequence
- **E14: instructor calls “engine failure”; complete ABC checks; go-around at pre-briefed height** – counts as 2nd S standard flight if requirements met
- E16: instructor creates UA; student detects and recovers
- Inbound call at 5–10 NM; overhead join; BUMPFISH; circuit and landing
- Simulated radio failure if called: confirm failure; transmit blind; squawk 7600; describe actions

E13 FORMAL ASSESSMENT

- ☐ ERSA home aerodrome: elevation, CTAF, circuit direction, runway details; frequency briefed before departure
- ☐ All mandatory and recommended CTAF calls – correct structure and timing without prompting
- ☐ Active listening maintained; traffic picture verbalised throughout
- ☐ Transponder operated correctly throughout
- ☐ Airspace awareness; training area boundaries monitored
- ☐ Radio failure procedure applied correctly without prompting when called
- ☐ MAYDAY format correct; transmitted on Centre without prompting (during FLWOP sim)
- ☐ Area departure and arrival calls correct; overhead join calls correct

AREA SOLO AUTHORISATION REQUIREMENTS

- ☐ E7 at S standard (Phase 1)
- ☐ E10 Scenario Based Stalling at S standard (L4.3)
- ☐ E14 FLWOP at S standard on **two separate flights** – this flight may count as the second
- ☐ E15 IOR – at S standard (L4.1)
- ☐ E9 Adv Turn and E16 UA at S standard – manoeuvres managed safely
- ☐ **E13 formal assessment: all variables at S or above**
- ☐ Pre-Solo Air Legislation Exam passed
- ☐ Weather: xwind within solo limit · ceiling >2500 ft AGL · vis >8 km · no convective activity, conditions expected stable for duration

STANDARDS FOR PROGRESSION

P **S**

If all requirements met → Area solo authorised. Any NC or P items → address before area solo commences.
Assessment recorded as P, S, C or NC per element; E13 competency variables recorded S, C or NC separately.

C **NC**

⚠ SAFETY Element-specific minima apply: ceiling >3000 ft for stalling, >2500 ft for other area exercises
