

AIM: Demonstrate all 16 flight elements and W&B competency to C standard in a simulated flight test conducted by the CFI or Senior Instructor.

PRE-TEST GATE – MUST CONFIRM BEFORE PROCEEDING

- ☐ Logbook complete and up to date; all flights entered and signed
- ☐ Minimum 20 hours dual flight training
- ☐ Minimum 5 hours solo PIC time
- ☐ BAK, Air Legislation, Radio and Human Factors exams passed and recorded
- ☐ Weight and Balance assessment at C standard (L5.1)
- ☐ All 16 flight elements at C standard in training record
- ☐ Flight test booked with CFI or designated examiner
- ☐ Valid RAAus Student Pilot Certificate; membership current; health declaration current

ELEMENT SEQUENCE REFERENCE

- E1: Pre-flight prep and ground operations
- E2: Effects of controls (en route or as exercise)
- E3: S&L – cruise and slow cruise
- E4: Vy and Vx climbs; level-off
- E5: ≥ 2 descent profiles; level-off
- E6: 15° and 30° AoB turns
- E7: Slow flight; HASSELL; stall recognition; incipient recovery
- E8: Takeoff – brief before taxi; Vy; after-takeoff checks
- E9: 60° AoB steep turns; spiral dive recovery
- E10: ≥ 2 scenario stalls; HASSELL
- E11: Normal circuit; EFATO sim; flapless approach
- E12: Landing – gate applied; hold-off; touchdown ± 30 m
- E13: All calls correct; active listening; transponder; radio failure if tested
- E14: ABCDEF from memory; FLWOP circuit; MAYDAY sim
- E15: Correct departure and overhead join; airspace management
- E16: One nose-high, one nose-low; correct recovery sequence

EXAMINER ROLE

- Silent assessor throughout – **no coaching or prompting**
- Intervene only for safety
- Record C, S or NC per element with notes
- **NC, P or S items from practice test = priority targets for L5.3 remediation**
- If multiple elements clearly not at C standard → stop flight; debrief; reschedule after targeted remediation
- Note: assessment flight can cause increased student stress – brief stress management before flight

COMMON NC TRIGGERS

- **W&B incomplete or incorrect** → NC for E1
- **HASSELL omitted** → NC for E9 and E10 – non-negotiable
- **Stable Gate not applied** → NC for E12
- **Radio omissions on transitions** → NC for E13
- **ABCDEF incomplete or out of order** → NC for E14

STANDARDS FOR PROGRESSION

P **S**

Practice test pass: all 16 elements at C; W&B correct; no NC items → flight test confirmed
Any NC items → L5.3 remediation required before flight test is attempted

C **NC**

⚠ SAFETY All element-specific minima apply: ceiling **>3500 ft** for stalling, **>2500 ft** for area exercises, **>1500 ft** for circuit elements · EFATO brief before departure · ABCDEF sequence briefed before FLWOP sim · Examiner non-interventionist but safety-ready at all times
