

AIM: Confirm E9 to S standard (student-led). Introduce ADM. Develop precautionary search (PSL) procedure to S standard.

P Departure/transit: Student as PIC throughout; *awareness of landing fields*

☐

P E9 CHECK: Student led, instructor silent observer; HASSELL; steep turns 45° and 60° L and R; spiral dive check; instructor records S or NC

☐

D PSL demo – instructor: Announces deteriorating weather scenario; applies ADM aloud (Time → Assess → Predict → Evaluate); selects field; joins at 1000 ft; first pass; circuit to downwind; approach to 500 ft; second pass; decision; go-around

☐

P Return: Student as PIC; join circuit

☐

P PSL practice – student at aerodrome: Student selects “field”; 1000 ft first pass; approach to 500 ft second pass; states landing/reject decision with reasoning; third pass at 300 ft; PAN-PAN simulated

☐

ADM FRAMEWORK

- **Time:** How much time do I have to solve this? (Stops panic; starts problem solving)
- **Assess:** What do I know? What are my resources? (Fuel, altitude, weather, alternates)
- **Predict:** If I do Plan A, what problems will I encounter?
- **Evaluate:** Does the outcome match the prediction? Re-assess if not

COMMON ERRORS

- **PSL decision delayed** -> ADM must drive an **early** decision; waiting until the ceiling is at 1000 ft is too late
- **First pass too fast or too high** -> Configure to 80 kt and 1000 ft AGL before the first pass
- **PAN-PAN omitted** -> Non-negotiable part of the PSL procedure
- **E9 NC** -> Note in training record; continue PSL for exposure; schedule remediation before L12 gate

STANDARDS FOR PROGRESSION

P S

E9 check recorded separately: S confirmed ($\pm 5^\circ$ bank, ± 150 ft, spiral correct) or NC noted for remediation

C NC

E14a Solo (S) – first of two flights: PSL passes at correct heights (1000 ft ± 150 ft, 500 ft ± 100 ft); ADM applied aloud before entry; decision with correct reasoning; PAN-PAN without prompting; YSPT ERSa briefed

⚠ SAFETY Ceiling **>2500 ft AGL** for E9 · E9 above 2000 ft AGL; spiral recovery above 1500 ft AGL · PSL passes: 1000/500 ft (field), 300 ft **aerodrome only – never over a field** · Go-around from PSL min 300 ft AGL (aerodrome), 500 ft AGL (field) · **E9 check: instructor is observer but safety-ready**
