

AIM: Build solo training area experience, consolidate all Phase 4 elements toward C standard, and maintain full independence in pre-flight administration.

PRE-SOLO SELF-BRIEF (EVERY SESSION)

- **NAIPS:** TAF/GAF/GPWT obtained and interpreted; conditions suitable for flight duration?
- **BOM radar:** precipitation checked as supplemental
- **NOTAMS:** checked; restricted areas active?
- **Maintenance release:** reviewed; all items acceptable; anything to brief instructor?
- **EFATO plan:** briefed
- **Radio failure plan:** what will I do if radio fails in the training area?
- **HASELL heights:** if conducting stalls or steep turns – note recovery heights
- **Training area boundaries:** noted
- **IMSAFE:** am I genuinely fit to fly today?

DUAL CHECK – C STANDARD TARGETS

- **E9:** 60° steep turns $\pm 5^\circ$ AoB, ± 100 ft, rollout $\pm 10^\circ$; spiral dive recovery correct
- **E7:** All stalls recovered at onset; height loss ≤ 300 ft; HASELL every 15 min
- **E14:** Glide attitude within 5 s; FLWOP to 1000/500 ft; MAYDAY simulated; PSL correct
- **E15:** Airspace monitored continuously; circuit join correct procedure
- **E16:** Both UA recoveries correct; emergency actions from memory
- **Admin:** GAF interpreted correctly; NOTAMS thorough; MR reviewed and briefed completely

STANDARDS FOR PROGRESSION

P **S**

Solo (S): HASELL without omission; manoeuvres managed safely; airspace monitored; admin independent

C **NC**

C standard (all Phase 4 elements): See dual check targets above – consistent, professional execution with no instructor input

SOLO OPERATIONS – STUDENT RESPONSIBILITIES

- Conduct all area operations independently; instructor is not available for assistance
- **HASELL before required sequence and every 15 min** – non-negotiable solo
- Manage all airspace awareness, boundaries, and radio calls independently
- Self-debrief after every session: describe each manoeuvre; report deviations honestly to instructor

MINIMUM REQUIREMENTS BEFORE PHASE 5

- ☐ Sufficient experience/competency for instructor confidence in all Phase 4 elements
- ☐ All Phase 4 elements at or approaching C standard on dual check
- ☐ BAK exam passed (min 80%, KDR required)
- ☐ Air Legislation exam passed (min 80%, KDR required)
- ☐ Human Factors exam passed (min 80%, KDR required)
- ☐ Radio exam passed (min 80%, KDR required)
- ☐ Total flight hours on track: minimum 20 hours total / 5 hours PIC before flight test

⚠ SAFETY Area solo minima every session: ceiling **>2500 ft AGL** · vis **>10 km** · no turbulence or convective activity · **Student must review MR and brief instructor before every solo** · Instructor confirms weather minima before every solo departure · If student reports concern after solo – debrief thoroughly before next flight
