

AIM: Address specific elements assessed as NC in the practice flight test and confirm C standard before the actual flight test proceeds.

REMEDIATION SESSION STRUCTURE

- **This is not a general revision flight** – targeted only at NC items from L5.2
- Student operates as PIC for all **trained** elements; instructor is observer
- Instructor assumes instructor role **only for NC elements**
- For each NC item: demonstrate correct technique if required → student practice → re-assess
- **W&B (if NC):** student completes fresh calculation on the ground; instructor confirms C standard before flight proceeds
- **At session end:** instructor re-assesses all previously NC elements
- **All at C standard** → flight test confirmed. **Any still NC** → second remediation before test

NC ELEMENT REFERENCE

- For each NC item identified in L5.2 debrief notes: instructor describes what was observed and what C standard requires
- Student states their understanding of the correction needed
- Refer to the specific Phase 1-4 lesson plan for demonstration and common error guidance for that element

STANDARDS FOR PROGRESSION

P **S**

All previously NC elements must be at C standard before the flight test proceeds.

C **NC**

W&B must remain at C standard as confirmed in L5.1.

Outcome recorded per element in training record. Flight test proceeds when all 16 elements and W&B are confirmed at C standard.

INSTRUCTOR CHECKLIST

- ☐ Review practice test debrief notes before the flight
- ☐ Confirm weather is suitable for all NC elements to be addressed
- ☐ Brief each NC item clearly: observed vs required
- ☐ Confirm student understands the correction before flight
- ☐ Record updated result (C or NC) per element with notes after the session
- ☐ Confirm flight test date: adjust if any element remains NC

POST-SESSION DECISION

- **All previously NC items now at C** → Flight test confirmed; confirm booking
- **Any item remains NC** → Agree additional targeted practice; schedule second remediation; do not book flight test until all elements at C
- **There is no limit to the number of remediation flights – the flight test proceeds when the student is genuinely ready**

⚠ SAFETY Apply the relevant lesson-specific minima for each NC element being addressed. EFATO brief before departure. If student shows significant pressure or anxiety – debrief and reschedule; a stressed student will not consolidate learning effectively
